F23 – visit 24
Version 4/2/2006

1. Question B1b: Add new response "none of the above" to question regarding treatment for abnormal Pap smear or abnormal cervical biopsy.
2. Add a prompt after question B1b. If B1b = 4, then complete ATC, obtain medical record release, and complete hysterectomy abstraction form.
3. Question B5: Revise the skip pattern for this question. If B5 = yes, interviewer should now skip to new question B6a.
4. Add a prompt after question B5. If B5 = 1, then complete ATC, obtain medical record release, and complete hysterectomy abstraction form.
5. Question B6: For visit 24 only, change skip pattern if B6 = yes. If B6 = yes, now skip to question B13 instead of B20.
6. Question B6a: Add new question to clarify the appropriate skip pattern for the pregnancy questions based upon the gynecological surgery history of participants. The interviewer need not read this question to the participant, but should answer it based upon the participant's earlier responses to questions B1b, B2, B3, B3a and B5.
