

**F31 – visit 23**  
**Version 10/01/05**

1. Switch order of questions A1 (pregnancy test) and A2 (date urine specimen collected) so that “date” can be skipped if no urine specimen is collected.
2. Add question B1a “Were any gyn specimens collected? If no, specify reason.” If no specimens at all were collected (e.g., participant didn’t return for gyn visit or refused gyn exam), the rest of Section B can be skipped.
3. Clarify when hair specimens should be collected from HIV-positive participants in Section C. “N/A” should be circled **only** if HIV-positive participant has taken no ART since her last study visit.
