

Hand / Manual Differential (L03a)
Version: 10/01/04a

1. Narrow ranges in Apollo based on recommendations by Laboratory/Specimen Working Group.
2. Print ranges on form so that staff transcribing lab reports to form have a clear indication at the time of transcription of out-of-range values that require confirmation.
3. During data entry, out-of-range lab values should be confirmed using the clinical report/original data source unless confirmed on the L03a that the result is abnormal.
