

**WIHS VIROLOGIC REBOUND AND RESISTANCE STUDY
QUESTION BY QUESTION SPECIFICATIONS
VRS 1r: ELIGIBILITY FOR VRS SUPPLEMENT**

Guidelines for completing VRS 1R, "Eligibility for VRS Supplement"

General Instructions:

This form is intended as a tool to help sites determine whether participants enrolled into the WIHS expansion cohort as HAART naïve are now on HAART and thereby eligible for the VRS supplement. This may be done at a core visit or in between core visit. Page 2 of the form is a worksheet to summarize current ART use. Page 1 lists the HAART definition used for the VRS supplement, and can help sites keep track of who has been screened and when. This form does not need to be data entered.

If the form is completed at a core visit, it can be completed by reviewing all Drug Forms 1 completed at that visit. If the form is completed over the phone, potential participants should be asked what medications they are currently taking.
