- Moderate:** Signs of fat maldistribution are noticed by patient or clinician without specifically looking for it. Patient may complain that current clothing has become tighter.

### Q7. Fat Wasting:

The examiner observes and grades the lipotrophy (both facial and limb) according to the following standards:

For facial lipotrophy:

- a) mild — clearly visible deepened nasolabial folds
- b) moderate — evidence of “hollowing out” of cheeks
- c) severe — hollowed cheek areas with underlying muscle clearly visible

For limb (arms and legs) lipotrophy:

- a) mild — increased prominence of veins
- b) moderate — increased prominence of both veins and muscles
- c) severe — a + b with overall thinning appearance of the limb
