

## STUDY VISIT 102 PREVIEW

By Amanda Long

Study visit 102 (V102) will be similar to V101 (which goes through September, 2022), with the addition of some new tests and surveys. The Visit 102 wave will last for one year (from October 1, 2021 to September 30, 2022) with each participant completing two visits within that period: (1) a “core” visit consisting of interviews (including follow-up COVID surveys), the ACASI, exams, and specimen collection; and (2) a “short” visit consisting of an abbreviated interview, as well as pulmonary function testing and specimen collection for selected participants. Visit 102 will also include two mental health assessments (the CAT-MH at the core visit and the CIDI at a separate visit) and neuropsychological assessment at the core visit. Whether you have your core or short visit first in visit 102 will depend upon when you started visit 101.

In addition, some studies will be done at only selected sites on a smaller group of participants, such as the Hearing and Balance study, the Sleep Study, and the Vision Study. Please reach out to your local site staff and CAB representatives or [mwccs@jhu.edu](mailto:mwccs@jhu.edu) for more information about the study tests and questionnaires being done at your site during V102. More information about V102 tests and surveys is in the table below.

Test or Survey	V101	V102
<b>All sites</b>		
Core interviews	X	X
Physical exam & specimen collection	X	X
Covid Surveys	X	X
Fibroscan	X	X
Pulmonary Function (PFTs)		X
CIDI mental health assessment		X
Cat-MH mental health assessment		X
Neuropsychological Assessment		X
<b>Selected Sites</b>		
Hearing & Balance study		X
Echo Reproducibility (heart test)		X
Brain MRI (brain images)		X
Sleep study		X
Vision study		X
