

Mental Health and Substance Use Substudy

(data collected Oct 2021 – Sept 2025)

What did we measure?

What is being measured:
Lifetime and past 12-month
mental health and substance
use disorders

Measure: WHO Composite
International Diagnostic
Interview (CIDI) as defined by
American Psychiatric
Association Diagnostic and
Statistical Manual-5

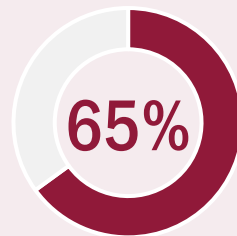

How often: One time

Who did we collect data from?

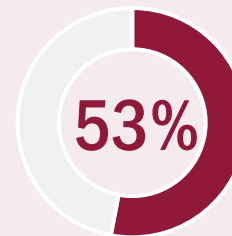

3361

men and women living with and
without HIV at all 13 sites

57 years old median age
(range 18-97 yrs)

living with HIV

women

What can we learn from the collected data?

- ☐ How common mental health disorders are
- ☐ How common substance use disorders are
- ☐ Relationship between behavioral and physical health conditions
- ☐ How behavioral health disorders affect HIV treatment and outcomes as people age

Scientific lead(s) for this study: Dr. Judith Cook
