

Echocardiogram Substudy

(data collection Oct 2022 –Sept 2026)

What did we measure?

What is being measured:

The structure of the heart and its function

Measures:

Echocardiogram examination (an ultrasound that takes pictures of the heart and records blood flow through the heart and attached blood vessels)

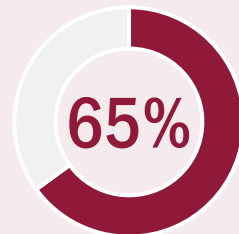

How often: One time

Who did we collect data from?

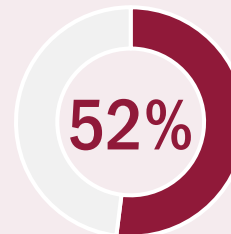

2988

men and women 40 yrs+ living with and without HIV at all sites

58 years old median age

living with HIV

women

What can we learn from the collected data?

- ☐ How HIV and HIV-related factors affect the start of heart problems or make heart problems worse

Scientific lead(s) for this study: Dr. Joao Lima, Dr. Jorge Kizer, Dr. Katherine Wu, Kimberly Keck
