

# Hearing and Balance Substudy

(data collected Oct 2020 – Sept 2022)

## What did we measure?

**What is being measured:**  
Hearing and balance

**Measures:**  
10-minute National Health and  
Nutrition Examination Survey  
(NHANES) hearing and balance  
survey

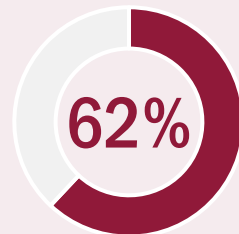

**How often:** One time

## Who did we collect data from?

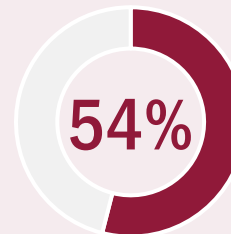

**3727**

men and women living with and  
without HIV at all sites

**57 years old** median age

living with HIV

women

## What can we learn from the collected data?

- ☐ How common are symptoms for:
  - trouble with hearing
  - vertigo (feeling like you or the space around you is spinning)And is it different in people living with and without HIV?
- ☐ Relationship between hearing and vertigo symptoms and how well the brain functions (thinking, remembering)
