

Tooth Count Substudy

(data collection Oct 2022 – Sept 2026)

What did we measure?

What is being measured:

Tooth count and visual inspection of oral disease/conditions

Measures:

Photographs of the inside of the mouth:

- upper and lower parts of mouth
- any visible dental sores
- areas of the mouth that look different than expected

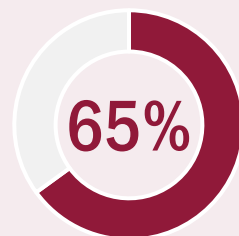

How often: One time

Who did we collect data from?

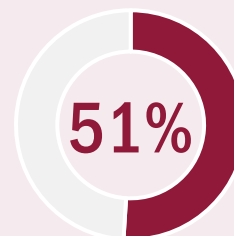

3349

men and women living with and without HIV at all sites

55 years old median age

living with HIV

women

What can we learn from the collected data?

- ☐ How common mouth/dental diseases and conditions are
- ☐ The relationship between mouth/dental disease and demographic, socioeconomic, and environmental factors
- ☐ How mouth/dental disease and its negative effect on the environment in a person's mouth/teeth are linked to health conditions in people living with HIV

Scientific lead(s) for this study: Dr. Apoena de Aguiar Ribeiro, Dr. Carrigan Parish, Catalina Ramirez
