SECTION E: AIDS DEFINING ILLNESSES

We are now interested in finding out about diseases that some women experience. These diseases are rare and may occur in women who are HIV negative; however, they tend to occur more often in HIV positive women. As I read this list of diseases, please let me know whether or not you have had any of them. Many of the terms in this section are very technical and you may not have heard of them. If you've never heard of a term just say so.

F3. Sometimes patients stop taking all of their antiretroviral medications for planned or prescribed periods of time to try to boost their immune systems. These therapy breaks, also called structured treatment interruptions, are very different from any therapy breaks that were not planned or prescribed, such as forgetting to take your medications, running out of pills, or simply taking a break because you felt like you needed one. In the next series of questions, I want to know only about any breaks in your antiretroviral medications that you have taken in the past three months that were planned by you or prescribed by your provider.
