

**Sociodemographics (F21)**  
**Version: 04/01/08**

1. Add new question A8, interview language preference as this information was not collected at the 2001/02 recruit baseline visit. To ensure that participants with an abbreviated or missed visit do not miss this question, it will be left on the form for visit 29.
2. Fix typo in introduction before question B8 (“antiretroviral” medication).
3. Add a prompt before question B8 for interviewer to skip questions B8 and B8a if participant attended visit 27. These questions will be asked at visit 28 only of those women who missed visit 27, and then will be deleted for visit 29.
4. B9c: Add response option “3 N/A” so that HIV-uninfected participants can respond appropriately.
